

Proving that a Quadrilateral is a Parallelogram

The definition of a parallelogram gives one way to prove that a quadrilateral is a parallelogram (show both pair of opposite sides are parallel). Complete the following theorems which provide four more ways.

- 1) If both pairs of opposite sides of a quadrilateral are _____, then the quadrilateral is a parallelogram.
- 2) If one pairs of opposite sides of a quadrilateral are both _____ and _____, then the quadrilateral is a parallelogram.
- 3) If both pairs of opposite angles of a quadrilateral are _____, then the quadrilateral is a parallelogram.
- 4) If the _____ of a quadrilateral bisect each other, then the quadrilateral is a parallelogram.

Decide whether each quadrilateral is a parallelogram. If the answer is yes, state the definition or theorem that applies.

5)

6)

7)

8)

Find the values of x and y that make the quadrilateral a parallelogram.

9)

10)

11)

Answer Key

- 1) Congruent
- 2) Congruent and parallel
- 3) Congruent
- 4) Diagonals
- 5) Yes, diagonals bisect
- 6) No, could be trapezoid
- 7) Yes, both pairs of opposite sides are congruent (converse of alt. interior angle theorem)
- 8) No
- 9) $x = 3, y = 2$
- 10) $x = 37, y = 22$
- 11) $x = 9, y = 10$
